## WHAT IS AJAXPLORER?

Ajaxplorer is basically an open source software that turns instantly any server (on premise, NAS, cloud IaaS or PaaS) into a file sharing platform. But shortly describing, Ajaxplorer is an alternative File Browser or File Manager software built with some Ajax cool effects. *AjaXplorer* now becomes Pydio so the one we

use here on zPanel is not the latest version. However it is free, cool and awesome. It is really a great way to manage all your files in your server if you don't prefer to use FTP.

## THE STEPS TO INSTALL AJAXPLORER FILE MANAGER

**Step 1** .Login to your server as root.

**Step 2.** Type This Command :

```
| zppy repo add zpanel.url.ph/repo
```

**Step 3** – Now issue this command to update the repo:

```
| zppy update
```

**step 4.** Type This Command :

```
| zppy install ajaxplorer
```

**step 5.** Open Your Zpanel Server Then Login As Zadmin.

step 6. Next, enable Ajaxplorer module for Administrator, Reseller and Client then hit the Save Changes button.

## Configure Modules

Module	On/Off	Category	Up-to-date
 Ajaxplorer	Enabled 	File Management 	
 Aliases	Enabled 	Mail 	
 Apache Config	Enabled 	N/A (Module Admin)	
 Backup	Enabled 	Advanced 	
 Backup Config	Enabled 	N/A (Module Admin)	

**step 7.** Before you test it, you better do some necessary checks. Now go to Putty / Terminal window again then issue this command:

```
cd /etc/zpanel/panel/etc/apps/
```

```
chmod -R 777 ajaxplorer/data
```

**step 8.** Go To ZPanel Configuration Page File > Ajaxplorer And Then Clicking the **Launch Ajaxplorer** button.

### Notice:

Welcome to your new ZPanel installation! You can remove this message from the Client Notice Manager clients of service outages, upgrades and new features etc :-)
